DIGITAL THUMBS UP

At the forefront of plant safety

What is Digital Thumbs Up?

This system is a further level of safety between site personnel and machine operators that uses a simple red thumbs down (Do not approach) and green thumbs up (Safe to approach) alert.

When in operation, a vehicle shows a default red thumbs down. On approaching a machine, the pedestrian signals the driver or operator with a thumbs-up gesture from a safe distance asking for permission to enter the work zone.

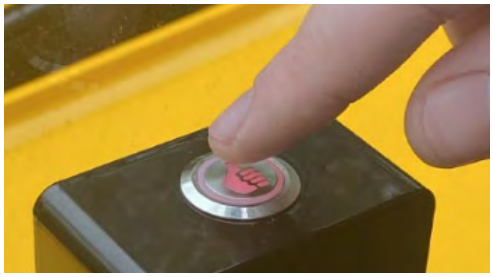
On seeing the thumbs-up signal, the operator will bring the machine to a controlled stop then press the in-cab digital "Thumbs Up" button, which disables the machine and changes the LED sign to a green thumbs-up (This can be accompanied by an optional audible acceptance message).

Personnel can then approach the machine with confidence, knowing they have been acknowledged by the operator.

This system can be used as a standalone solution or in conjunction with other FTC safety solutions products, such as Fleet Aware or the Pedestrian Detection Camera system, enhancing overall site safety and communication standards in multiple industries.

Key Features

- High visibility even in poor weather conditions
- Loud high decibel audio warning alert
- Simple and easy to use for machine operators
- Clear and safe procedure for site users
- Easy and quick to install on any machine
- 12 month guarantee on hardware
- Components all IP67 rated



Simple in-cab operation

Red light - do not approach
Green light - machine disabled and safe to approach
