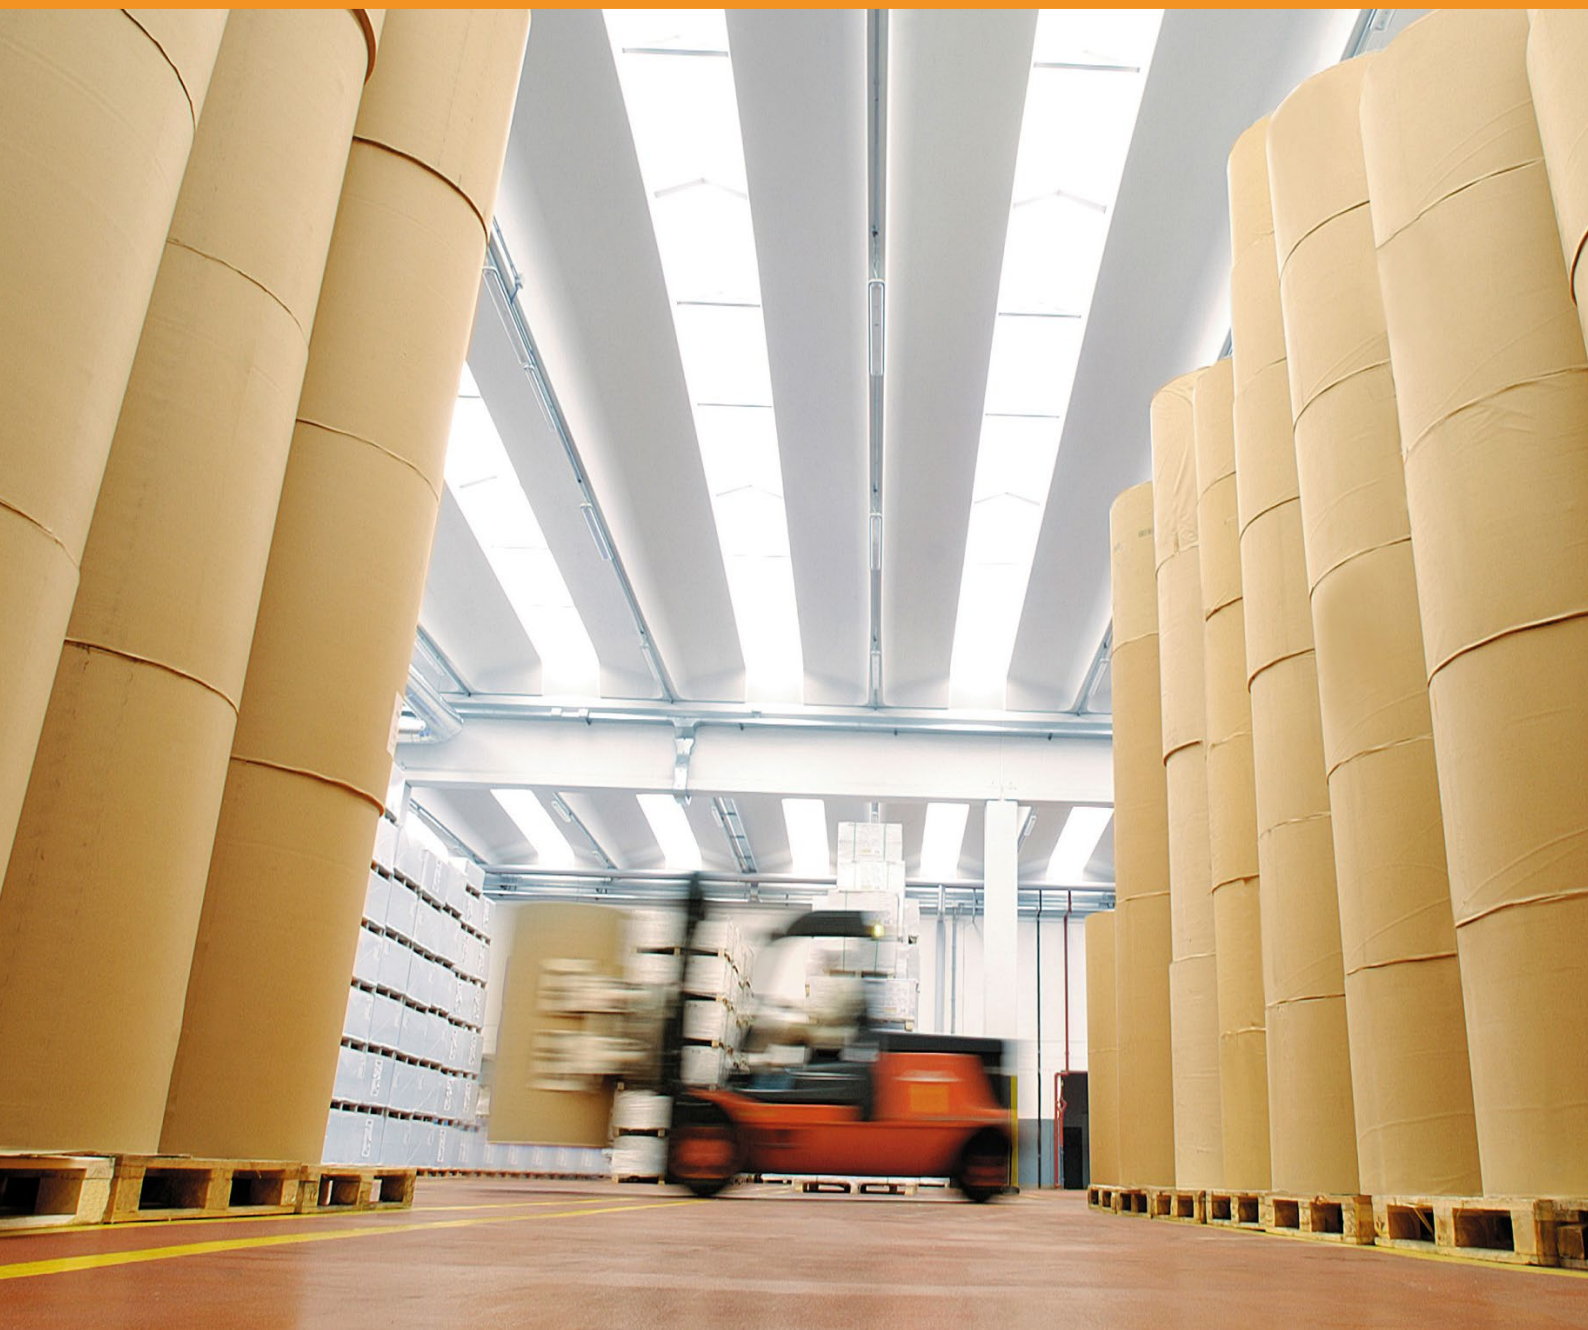
SPEED-WATCH

A warning device that can save lives



What is Speed-Watch?

SPEED-WATCH is an anti-speeding device for use on forklift trucks or any low speed warehousing or factory mobile equipment. The SPEED-WATCH is very reliable with many repeat customer installations since its launch in 2005.

The SPEED-WATCH warns a driver that the site speed limit has been exceeded. The SPEED-WATCH initially activates a red warning light and buzzer on the dashboard once the speed limit has been reached. If the driver does not slow down, within two seconds, a siren sounds and a second warning light switches on. The speed limit is easily and accurately set to any desired speed limit

SPEED-WATCH has two site safety functions:

✔ Makes the drive aware of his speed

✔ Warns any pedestrians in the vicinity

SPEED-WATCH has an auxiliary output which switches on with the siren. This can be connected to a fuel solenoid, switch, actuator, or any other device to enforce the speed limit.

Full installation instructions are available with each unit.

FTC Ltd can provide a full training and installation programme.

Key Benefits

- Improve site safety
- Stop speeding drivers
- Improve driving standards
- Warn pedestrians
- Decrease damage
- Lower fuel expenditure
- Reduce maintenance costs
- Inexpensive
